

ARBOR AND ADAPTER SYSTEMS

Tooling systems and application consulting for the milling of complex 2.5 and 3D geometries

pokolm
PREMIUM TOOLS. WE KNOW HOW.

CATALOGUE ON ARBOR AND ADAPTER SYSTEMS

THE STRUCTURE: 1. MACHINE , 2. TOOL

The Catalogue on Arbor and Adapter Systems from Pokolm

Dear Customer, In this catalogue you will find up-to-date and detailed documentation about Pokolm arbor and adapter systems.

Extremely customer-friendly: this catalogue is entirely structured around the machine side connection!

Our arbor and adapter system product catalogue has been enhanced in order to meet the current industry requirements and also now includes important and interesting information.

We are sure that you will be able to quickly find our products and the necessary information in the new catalogue structure. If you have any questions, suggestions or particular product requirements then do not hesitate to contact us!

We are happy to be of service and look forward to hearing from you!

Your Pokolm Team

All rights reserved. Reproduction, modification, and any type of duplication in whole or in part is prohibited without written consent. This documentation replaces all previous issues. Dimensions and designs contained in previous documentation in digital or printed form may have changed as a result of modified standards. We reserve the explicit right to make changes based on new standards or technical advancements. The graphical depiction of products is for clarification purposes and does not always correspond in every case with every detail to the actual design. Items conforming to older standards are delivered until their stocks are exhausted. NO liability is accepted for defects.

Being better means not just staying ahead of the competition but also scrutinising ones own products and services looking for ways to improve and become more efficient. Pokolm is well-known for this practice. This is also one of the reasons why successful practitioners choose Pokolm premium tools. This added value that gives Pokolm customers a decisive edge over the competition is created by merging excellent products with outstanding technical service advice and tailoring both entirely to the needs of the customer. The structure of the product range and the corresponding documentation must also be 100% customer-oriented in accordance with Pokolm's standards.

The structure of the Pokolm arbor and adapter catalogue is customer-oriented. This is because it structured around a machine-side connection. Simply choose the connection form and connection dimension in the

structure for the type of machine in use and all of the corresponding tool connections will be listed thereunder. The arbors within this group are then categorised according to the connection type and size.

BALANCING

Balance grades of Pokolm arbors and adapters

Calculations and definitions

Kind of taper	SK/BT			HSK					
	view								
view									
size	30	40	50	32	40	50	63	80	100
form			all	all	all	all	all	all	all
grade level	2,5	6,3	16	2,5	2,5	2,5	2,5	6,3	16
rpm	30.000	18.000	8.000	30.000	30.000	30.000	30.000	12.000	8.000

Deviations from this chart are possible – please tell us what your requirements are.

Balancing grade classifications and typical applications:

- G 0,4** e.g. microfinishing machines
- G 1** e.g. low-power motors, driving gears for grinding machines
- G 2,5** e.g. cutting tools, small arbors and adapters, electrical motors, turbines
- G 6,3** e.g. cutting tools, arbors and adapters, machine tool parts
- G 16** e.g. big arbors, cardan shafts, drive shafts
- G 40** e.g. universal shafts, automotive wheels, crank gear drives

Formulas:

Calculation of remaining balance error in [gmm/kg]	Calculation of radian frequency in [1/s]	Calculation of balancing grade levels in [mm/s]	Calculation of compensation mass
$e = \frac{U}{m}$	$\omega = \frac{2 \cdot \pi \cdot n}{60}$	$G = e \cdot \omega = \frac{U \cdot \pi \cdot n}{m \cdot 30}$	$m_r = \frac{e \cdot m}{r}$

Definitions and dimensions:

- | | | | |
|----------------------------|--|-------------------------|---|
| G | = balancing grade level in [mm/s] | U | = balance error [$m \cdot e$] in [gmm] |
| e | = remaining balance error in [gmm/kg] or eccentricity of center in [μm] | m | = rotor weight in [g] |
| ω | = radian frequency ($2 \cdot \pi \cdot f$) in [1/s] | F | = centrifugal force ($U \cdot \omega$) in [N] |
| f | = frequency ($n/60$) in [1/s] | r | = remaining balance error in [mm] |
| n | = rpm | m_r | = remaining balance error |

Balance errors and balancing

Definition of balance error

Rotational axis ≠ mass axis
A balance error occurs when the rotational axis of a rotor part does not correspond to its mass axis.

Rotational axis = mass axis

Reasons for Balance Errors:

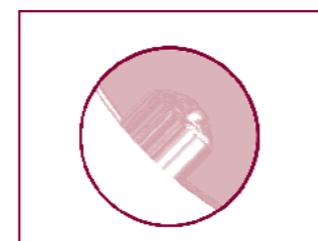

- ⊕ Indexing seat for tool changer in SK and HSK
- ⊕ Driving slots in SK and BT
- ⊕ Driving slots in HSK-A, C, CE
- ⊕ any kinds of flats on tool shanks
- ⊕ Locking screws for tool shanks with flats
- ⊕ Non-uniform pitch on cutting tools
- ⊕ Collets and tightening nuts
- ⊕ Production tolerances

Unbalanced arbor

Balanced arbor with corrective drill hole

Balancing by drilling corrective holes. Sample calculations and detailed illustration, see next page.

Example of a calculation:

Shrinking Arbor HSK 63A: 50 08 A63 S

weight: 760 grams

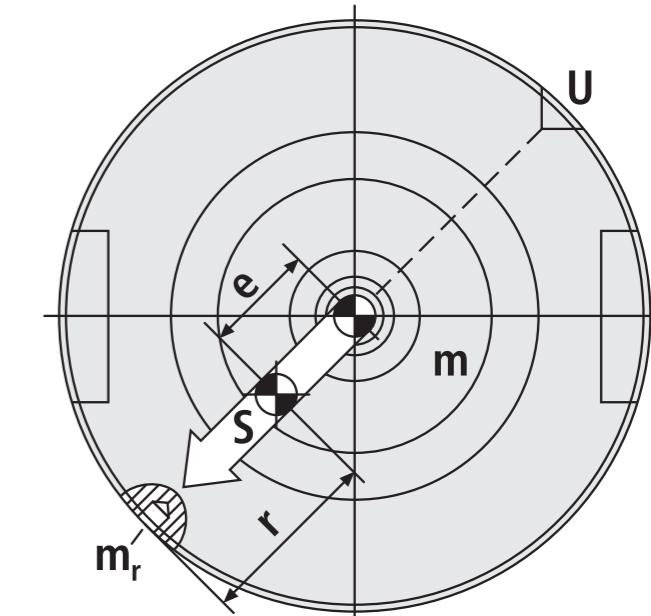

Taper radius: 31,5 mm

Balance grade: G 6.3 at 20,000 rpm

$$G = \frac{U \cdot 2 \cdot \pi \cdot n}{m \cdot 60} \Leftrightarrow U = \frac{G \cdot m \cdot 60}{2 \cdot \pi \cdot n}$$

$$U = \frac{6,3 \cdot 760 \cdot 60}{2 \cdot \pi \cdot 20.000} \Rightarrow U = 2,286 \text{ gmm}$$

$$e = \frac{2,286}{760} \Rightarrow e = 3 \mu\text{m}$$

Note to illustration: "S" = mass axis

Calculation of remaining balance error in example above:

$$m_r = \frac{m \cdot e}{r} \Rightarrow m_r = \frac{760 \cdot 0,003}{31,5} \Rightarrow m_r = 0,072 \text{ g}$$

By means of precision balancing, the remaining balancing error has been minimized to 0.072 g (in relation to the taper radius of the arbor of 31.5 mm).

Your advantages – why this is such an important subject.

Balancing, particularly in connection with high concentricity, prevents your spindle from damage, because it decreases the centrifugal forces and reduces the formation of vibrations. This results in an extremely smooth operation, which greatly increases machining and component quality. In addition, it allows higher cutting parameters – both in high-speed milling and in conventional milling.

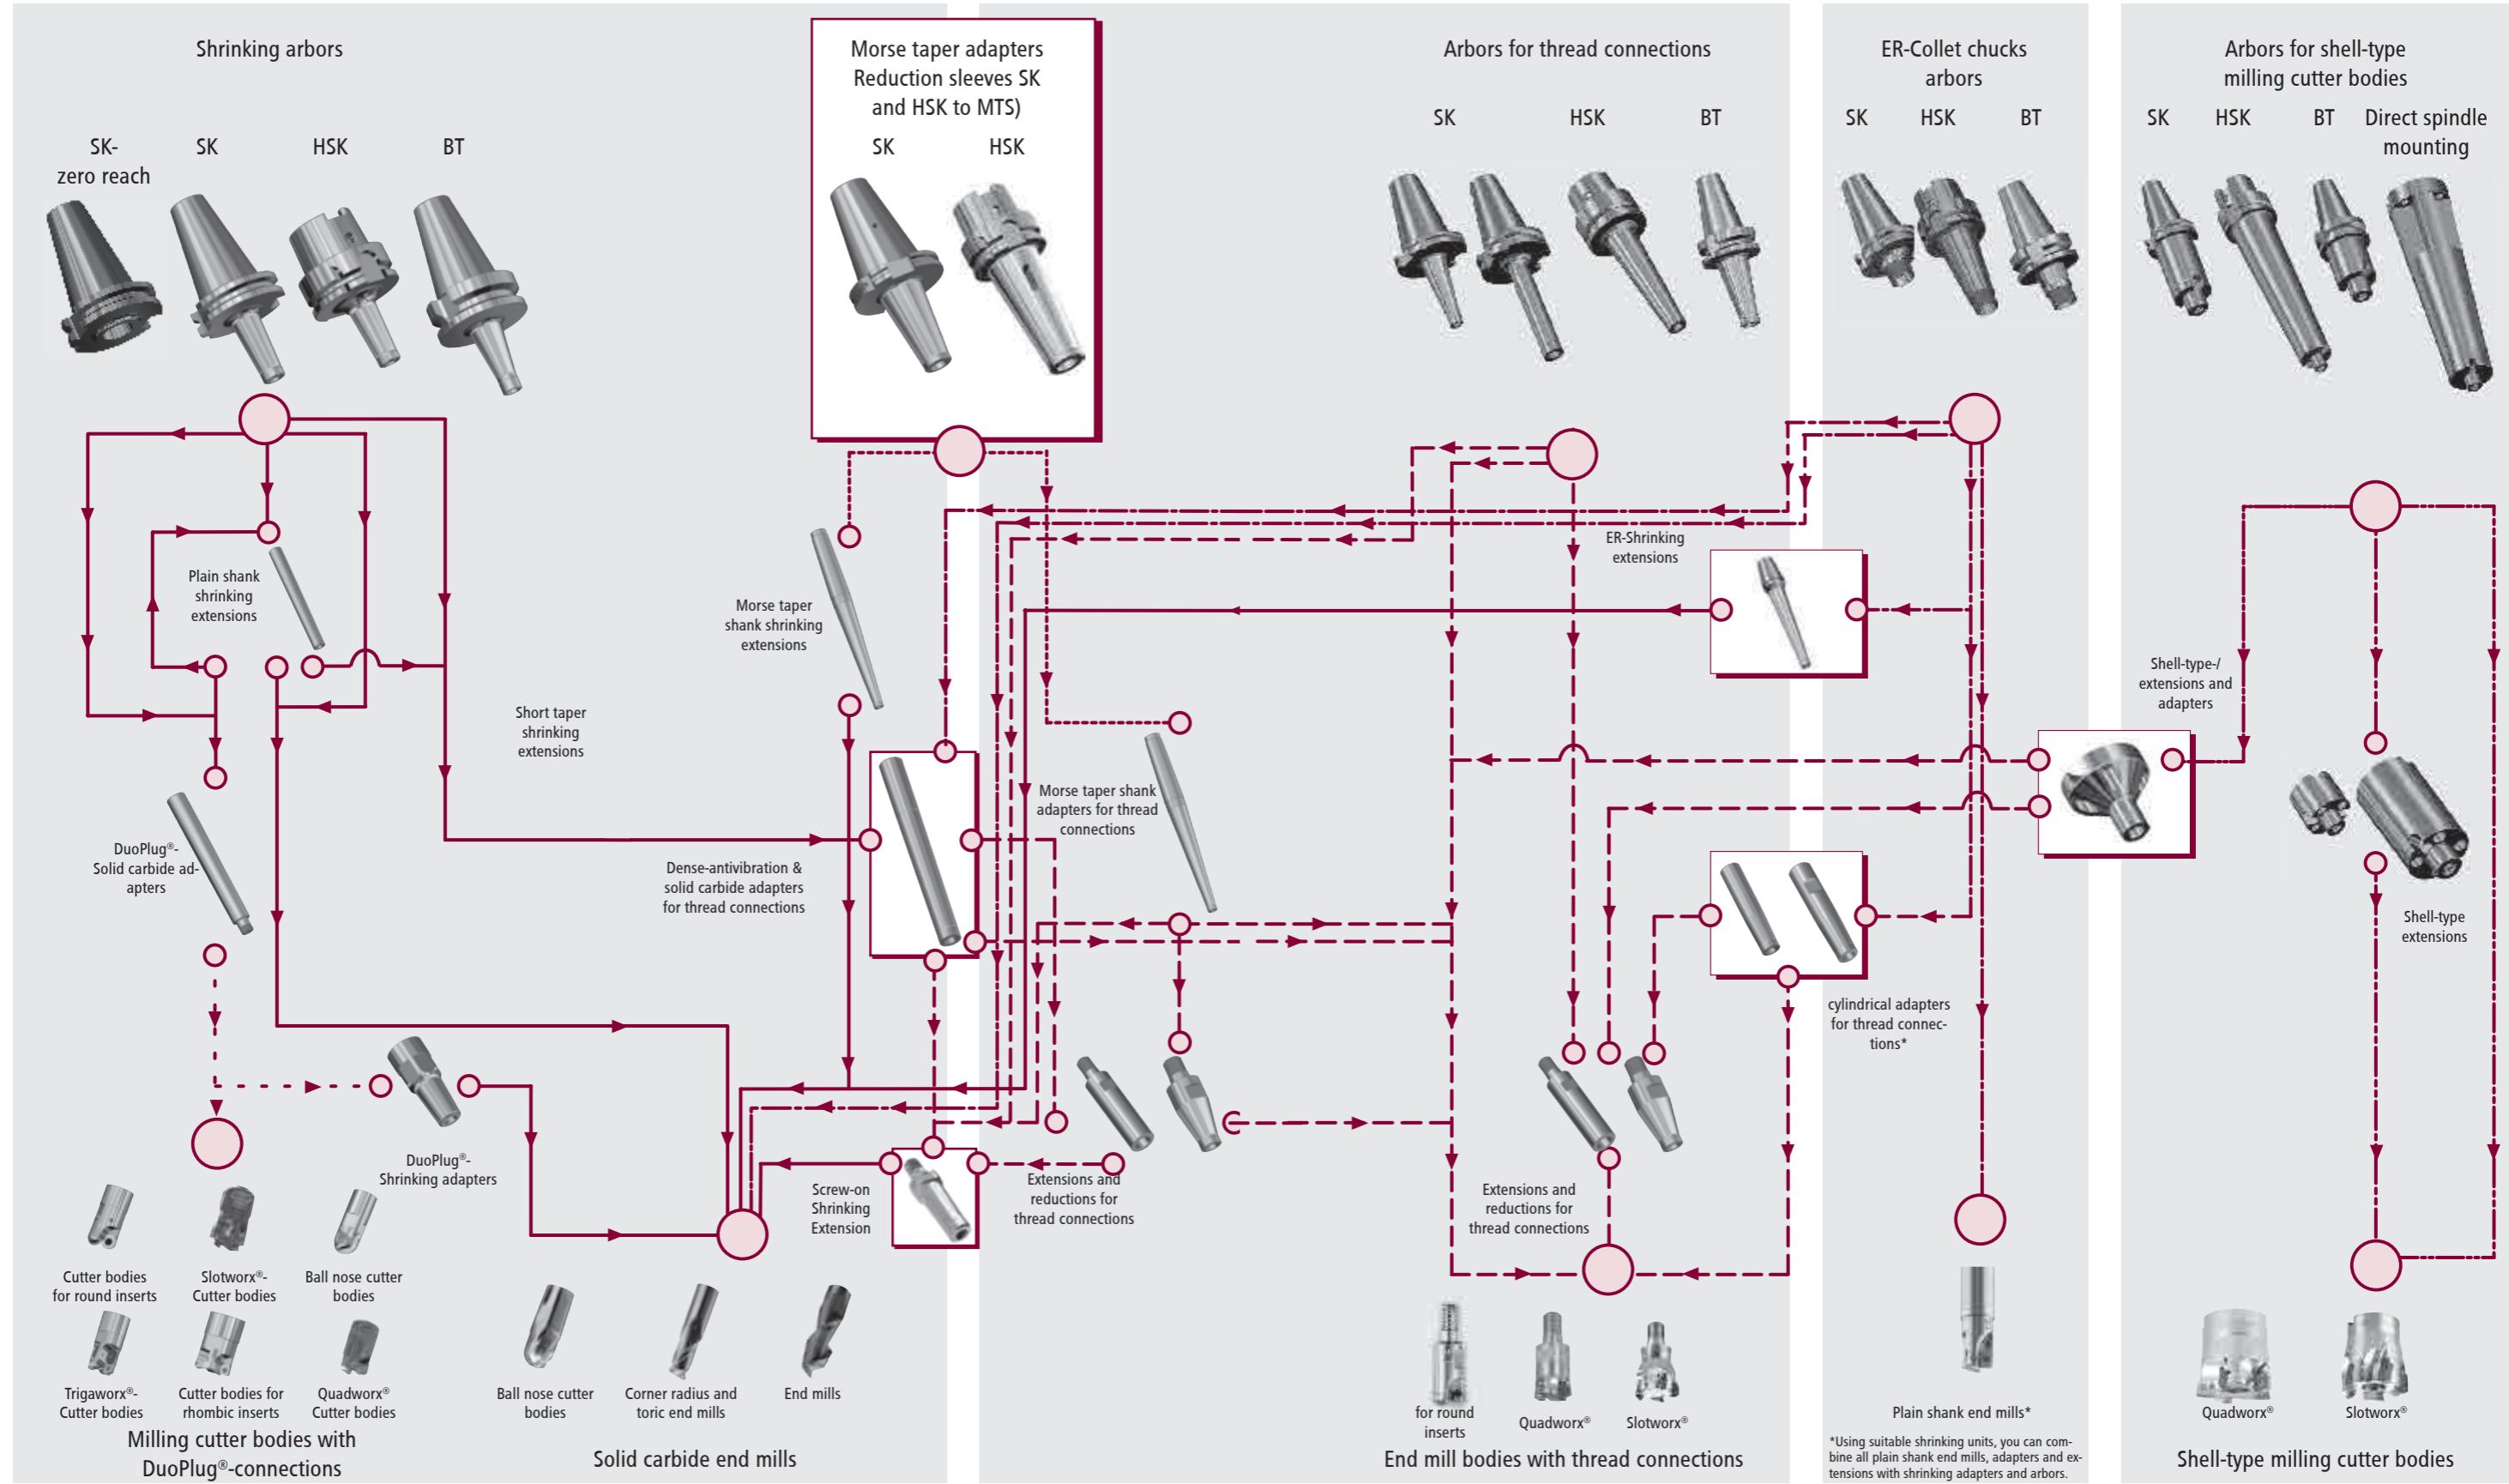

THE POKOLM TOOL SYSTEM

over 500000 combination possibilities

The listed options are applications examples. Do not hesitate to contact our technical field service for a huge number of further possible combinations.

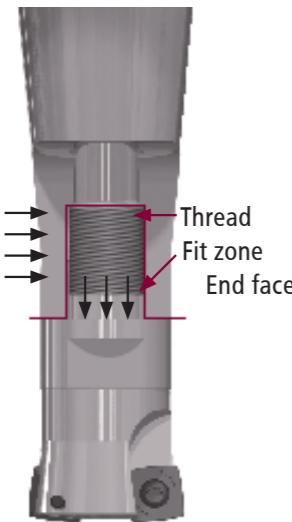

TECHNOLOGICAL COMPARISON

Thread Connection vs. Pokolm DuoPlug® Connection

WHERE THE DIFFERENCE IS:

**Pokolm Thread Connection –
our high-performance standard**

Pokolm Thread Connection

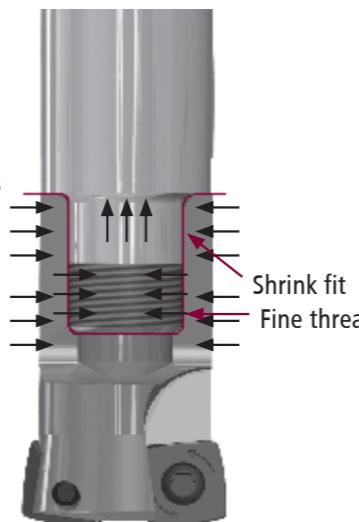

The black arrows show the retention and supporting forces.

This standard thread connection is produced with the best tolerances possible using the latest technology. We maximize the efficiency of our Pokolm thread connections by optimizing our design of arbors, adapters, and milling cutter bodies.

**Our patented protected DuoPlug® System –
the perfect increase**

Pokolm DuoPlug®=
Shrink and Screw

The black arrows show the retention and supporting forces.

Our Pokolm DuoPlug® system offers optimum rigidity and extremely high precision and concentricity. As a supplement to conventional thread connections, the retention and supporting forces between cutting tool and adapter act along the entire surface of the shrink fit and a large part of the shrink thread. For more information, please see the assembling and dismantling instructions for our DuoPlug® system in the "Operation Data" chapter.

The fact is:

DuoPlug® perfects the thread connection by means of greatly increased retention forces, resulting in the highest possible precision for extremely slim dimensions.

**Pokolm Thread Connection –
our high-performance standard**

Performance

- ⊕ no undercut, thus avoiding a rated break-point
- ⊕ extremely precise fit zone and extremely precise flange contact surface
- ⊕ better tensile strength and heat resistance because of the special materials and extra-hard coating
- ⊕ for hundreds of tool changes
- ⊕ optimized chamfers on arbors and adapters

Your Advantages

- ⊕ increased process reliability
- ⊕ universally applicable for all roughing and finishing operations
- ⊕ better fatigue strength and red hardness
- ⊕ lower tool costs because of longer tool life
- ⊕ considerable increase in stability because of larger flange contact surface

Ideal Applications

- ⊕ low-cost standard equipment for milling operations in shallow and medium-deep cavities
- ⊕ especially for deep machining applications without vertical walls

**Our patent protected DuoPlug® System –
the perfect increase**

Performance

- ⊕ maximum precision and concentricity
- ⊕ optimum stability
- ⊕ absolutely backlash-free class of fits by screwed connection
- ⊕ extremely precise and consistant connection
- ⊕ clearly increased retention forces compared to conventional thread connection
- ⊕ better tensile strength and heat resistance because of special materials and extra-hard coating

Your Advantages

- ⊕ longer tool life
- ⊕ absolutely minimal vibrations with long overhangs
- ⊕ renders top precision in finishing operations
- ⊕ increased availability of tool system and increased process reliability
- ⊕ improved performance in roughing operations
- ⊕ better fatigue strength and red hardness

Ideal Applications

- ⊕ for maximum precision in finishing operations
- ⊕ roughing and finishing applications with long overhangs
- ⊕ ideal for applications on vertical walls because of extremely slim arbor/adapter system

AND THERE'S STILL MORE E.G. SK/BT30 AND HSK25

As a Pokolm customer you are accustomed to a broad range of products and a full service with regard to technical matters. „Everything from a single source,” is our motto to ensure ease of purchase and optimum use of our products. By this we do not just mean standard products.

Special items not offered by everyone enhance the range of products for our customers - even in the area of tool arbors. This is why you will also find designs with SK30 and BT30 machine-side connections in the Pokolm catalogue of arbor and adapter systems.

SMALL CAN BE THAT BIG: ORIGINAL SIZE!

Pokolm Frästechnik GmbH & Co. KG has more to offer and provides a range of products that is second to none when it comes to completeness even in the area of arbor and adapter systems for tools with an HSK machine-side connection.

This means that arbor systems with an **HSK25** connection dimension are also available. And of course everything is „made by Pokolm” and thus „made in Germany” in order to satisfy the highest quality demands!

THE POKOLM ARBOR SYSTEM

The optimum solution for your application

Arbor System		Advantages	Recommended applications
ARBORS (TAPERED) for THREAD-DED SHANK END MILLS	1	<ul style="list-style-type: none"> ⊕ rigid, low-cost standard design ⊕ large variety of types and lengths provides additional flexibility by using extensions and reductions ⊕ gaining rigidity by avoiding unnecessary interfaces 	<ul style="list-style-type: none"> ⊕ milling in shallow to deep profiles, for small milling cutter bodies up to 42 mm diam.
ARBORS for THREAD-CONNECTIONS CYLINDRICAL	2	<ul style="list-style-type: none"> ⊕ slim shape ⊕ additional rigidity by avoiding unnecessary interfaces ⊕ where needed: additional flexibility with extensions and reductions 	<ul style="list-style-type: none"> ⊕ medium machining depths, especially on deep vertical walls for small milling cutter bodies up to 42 mm diam.
REDUCTION SLEEVES with MORSE TAPER ADAPTERS	3	<ul style="list-style-type: none"> ⊕ Morse taper adapters for threaded shank end mill bodies and for shrinking processes available for solid carbide tools ⊕ fast and flexible tool change ⊕ modular design allows machining of deep slots and cavities 	<ul style="list-style-type: none"> ⊕ for standard milling operations with normal rigidity and accuracy requirements, for milling cutter bodies up to 42 mm diam.
ARBORS for SHELL TYPE MILLING CUTTER BODIES	4	<ul style="list-style-type: none"> ⊕ rigid variant, in particular for roughing or pre-finishing operations with large cutter diameters and a large variety of designs ⊕ additional rigidity by avoiding unnecessary interfaces 	<ul style="list-style-type: none"> ⊕ shallow to deep machining situations for pre-finishing and rough machining, for milling cutter diameters from 42 mm to 125 mm and larger
ARBORS with DIRECT SPINDLE MOUNTING	5	<ul style="list-style-type: none"> ⊕ extremely rigid style through direct spindle mounting ⊕ excellent machining conditions in deep slots or cavities ⊕ additional rigidity by avoiding interfaces 	<ul style="list-style-type: none"> ⊕ deep and extremely deep machining situations on SK 50 machines which require extreme rigidity, for milling cutter diameters from 52 to 125 mm
SHRINKING ARBORS STANDARD STYLE	6	<ul style="list-style-type: none"> ⊕ slim style with 3° draft angle in direction of collar ⊕ direct shrink-grip of solid carbide tooling ⊕ additional rigidity by avoiding unnecessary interfaces ⊕ improved concentricity ⊕ combinable with solid carbide and dense antivibration adapters (see page 25-28) 	<ul style="list-style-type: none"> ⊕ machining situations in narrow space conditions for solid carbide end mills up to 25 mm diam., and when combined with solid carbide or dense antivibration adapters even for milling cutter bodies with up to 42 mm diam.

Arbor System	Advantages	Recommended Applications
SHRINKING ARBORS, REINFORCED DESIGN	<ul style="list-style-type: none"> 7 ⊕ 4.5° draft angle, reinforced shank ⊕ direct shrink grip of solid carbide end mills ⊕ additional rigidity by avoiding unnecessary interfaces ⊕ improved concentricity 	<ul style="list-style-type: none"> ⊕ milling with increased requirements for arbor rigidity for solid carbide end mills up to 20 mm diam.
ARBOR COMBINATIONS with DUOPLUG® ADAPTERS	<ul style="list-style-type: none"> 8 ⊕ extremely long and slim arbor combinations ⊕ greatest possible avoidance of vibrations by using solid carbide adapters ⊕ DuoPlug® connection for maximum precision and concentricity ⊕ stronger retention forces 	<ul style="list-style-type: none"> ⊕ machining in deep cavities also with vertical walls ⊕ roughing operations with maximum retention forces ⊕ finishing operations with very high requirements for surface finish ⊕ up to cutter diam. of 25 mm
ARBOR COMBINATIONS with DENSE ANTI-VIBRATIONADAPTERS	<ul style="list-style-type: none"> 9 ⊕ long and slim arbor combinations ⊕ minimal vibrations because of special dense antivibration material ⊕ thread connection, no shrinking process necessary 	<ul style="list-style-type: none"> ⊕ machining in deep cavities also with vertical walls ⊕ for narrow and deep moulds and dies ⊕ machining applications with normal vibration tendency ⊕ for cutter diam. of up to 42 mm
ZERO-REACH ARBORS*	<ul style="list-style-type: none"> 10 ⊕ by directly shrinking the solid carbide end mill or dense antivibration adaptor in the arbor taper, you can machine vertical walls right up to the arbor collar. This means great increase in rigidity because of the reduced distance between the spindle and tool. 	<ul style="list-style-type: none"> ⊕ machining of extremely deep cavities with vertical walls in very limited space and with limited movement of Z-axis, and high requirements for rigidity and vibration-free milling
ER20 PRECISION COLLET CHUCKS	<ul style="list-style-type: none"> 11 ⊕ universal and good value solution, direct grip of solid carbide end mills via collet without a shrinking device ⊕ also grips unusual shank diameters and shank diameters smaller than 3 mm 	<ul style="list-style-type: none"> ⊕ for fast changing applications ⊕ for finishing, pre-finishing, and moderate roughing operations
SHORT TAPER SYSTEM	<ul style="list-style-type: none"> 12 ⊕ extra slim arbor combination ⊕ extremely small dimensions 	<ul style="list-style-type: none"> ⊕ especially for machining components in reduced space situations, narrow and deep slots, etc. ⊕ for solid carbide end mills with 4 and 6 mm shank diam.

*Please note: Zero-reach arbors cannot be ordered separately. We only supply them in a shrink-grip connection with a solid carbide or dense antivibration adapter. (Please indicate desired adapter on purchase order form.)

POKOLM DUOPLUG® SHRINKING ADAPTORS

diam. 6 - 10 mm

DuoPlug®-shrinking adaptors are the ideal solution for economic milling or contouring with solid carbide end mills in deep slots, pockets or cavities, providing an exceptional high degree of rigidity during processing.

POKOLM SCREW-ON SHRINKING EXTENSIONS

diam. 6 - 12 mm

Pokolm screw-on shrinking extensions are the perfect alternative solution for machining cavities, if the corresponding shrinking arbor is not available. Hexagonal clamping flats - also suitable for use of hexagon wrenches (ring spanners) makes spanning most flexible.

The short and slim design with internal coolant supply are other positive benefits.

DENSE ANTIVIBRATION ADAPTERS -FOR SCREW-ON END MILLS

M 8 - M 16

POKOLM solid carbide adapters for screw-on end mills are characterised by their outstanding precision. These adapters are excellent for HSC finishing processes thanks to their vibration-reducing characteristics. Adapters are also available with an internal coolant supply upon request.

POKOLM CYL. SHAFT - DIN 1835 A

M 6 - M 16

Threaded adapters with a cylindrical shaft according to DIN 1835A. For use in collet chuck arbors or also hydraulic expansion chucks.

Manufactured according to the POKOLM standard with smoothed plane and mating surfaces and an internal coolant supply option.

POKOLM SHELL TYPE EXTENSIONS FOR SHELL TYPE MILLING CUTTERS

bore diam. 22 - 27 mm

Pokolm shell type extensions for shell type milling cutter bodies are the most effective solution if the reach of available standard shell-type arbor is not long enough. Manufactured according to the POKOLM standard with smoothed plane and mating surfaces as well as an internal coolant supply.

POKOLM SHELL TYPE EXTENSIONS FOR SCREW ON END MILLS

for screw-on end mills M10 - M16

Pokolm shell type extensions for screw on end mills are the most effective solution if the reach of available standard screw on type arbor is not long enough or if more stability is required. Manufactured according to the POKOLM standard with smoothed plane and mating surfaces as well as an internal coolant supply.

PRECISION COLLET CHUCKS

ER16 | for diam. 1 - diam. 10

Precision collet chucks according to DIN 6499-B

- Bi-conical - collet chucks
- slotted on both ends
- Concentricity 6 µm
- Repeat accuracy 6 µm

Collet chucks in other sizes and designs upon request.

SCREW ON TYPE CNC PRECISION DRILL CHUCKS

M16 thread connection

Screw on type CNC precision drill chucks with M16 thread connection open up more possibilities you have ever thought before. Useable in every screw on arbor, adaptor or extension allows a maximum of flexibility.

- can be used for up to max. 7,000 rpm
- with internal coolant supply
- independent of rotating direction
- extremely short and slim design

Scope of delivery includes small and large seal ring

HSK 40 FORM E

Drill chuck

- Hollow taper shank arbor CNC precision drill chuck according to DIN69893 form E, maximum precision
- approved for up to max. 7,000 rpm
- We can supply higher balance quality according to the balance classes upon request
- with internal coolant supply and bore hole for the coolant supply tube
- independent of rotating direction
- extremely short and slim design

Scope of delivery includes small and large seal gasket

HSK 63 FORM A

Drill chuck

- Hollow taper shank arbor CNC precision drill chuck according to DIN69893 form E, maximum precision
 - approved for up to max. 7,000 rpm
 - We can supply higher balance quality according to the balance classes on request
 - with internal coolant supply and bore hole for the coolant supply tube
 - independent of rotating direction
 - extremely short and slim design
- Scope of delivery includes small and large seal gasket

HSK 100 FORM A

Drill chuck

- Hollow taper shank arbor CNC precision drill chuck according to DIN69893 form E, maximum precision
 - approved for up to max. 7,000 rpm
 - We can supply higher balance quality according to the balance classes upon request
 - with internal coolant supply and bore hole for the coolant supply tube
 - independent of rotating direction
 - extremely short and slim design
- Scope of delivery includes small and large seal gasket**

Drill chuck

- Steep taper shanks DIN 69871 AD, maximum precision
- approved for up to max. 7,000 rpm
- We can supply higher balance quality according to the balance classes on request
- with internal coolant supply and bore hole for the coolant supply tube
- independent of rotating direction
- extremely short and slim design

Scope of delivery includes small and large seal gasket

HIGH-SPEED SPINDLE SYSTEMS

MODERN SPINDLE UNITS FOR EFFECTIVE MILLINGS RESULTS

Many milling machines – both old and new – have a relatively low maximum speed. Low maximum speed does have advantages in roughing operations, but are a big drawback for achieving effective feed rates. Low speed also greatly limits the advantages of modern CNC applications. The results: much longer machining times and loss of valuable production capacities.

We offer a convincing solution for this situation: Pokolm high-speed spindle systems for the most profitable machining results.

BETTER SURFACE FINISH RESULTS AND GREATLY IMPROVED CYCLE TIME

The advantages are impressive: higher cutting speeds, utilization of maximum feed rates – even with the smallest end mills – better surface finish and a great reduction in the need for EDM. Results: much shorter machining times and full utilization of the CNC advantages.

Pokolm provides various spindle systems for individual adaptation to existing machines and operation requirements. When you mill with an action angle of the A + C axes, you increase the variety of applications of your milling machine with our swivel device.

Get the maximum speed from your machines with Pokolm spindle systems. The result: You save time!

INDUCTIVE SHRINKING TECHNOLOGY

FIRST OPERATION: SHRINKING, THEN MILLING

Shrinking Technology convinces everybody compared with conventional chucking methods from the past. What counts? Absolute concentricity and highest precision with extensive extended tool life. Shrinking technology offers a safe friction-locked connection between tool and tool holder and provides an increased transferable torque. And the qualification for maximum revolutions is the best precondition for an optimum surface finish and for reducing costs for expensive finishing processes.

Compared to conventional milling chucks, shrinking arbors allow the use of distinctly slim adaptors for machining components with narrow situations, which would be unexecutable with other tool-holding systems.

SHRINKING TECHNOLOGY

TOOLING SYSTEMS PROCESS OPTIMIZATION CONSULTING IN MILLING STRATEGIES

TSI 3510

pokolm

Pokolm offers a substantial range of tooling for shrinking technology: several top-class Induction Shrinking Units, shrinking arbors for all possible machine connections and our patent-protected connection system DuoPlug® in combination with our „zero-reach“-shrinking arbors. (Additional information about the Pokolm DuoPlug® System can be found in the catalogue about „Milling Cutter Bodies“.)

ACCESSORIES

That's a must!
High-quality original accessories.

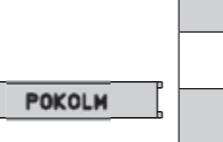

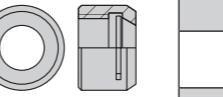

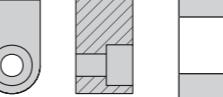

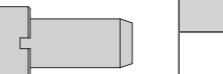

In case, you decide to purchase high quality Pokolm tooling, you should also set the same high standards, when purchasing accessories - just to be on the safe side.

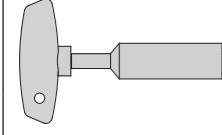

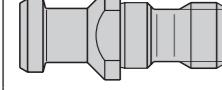

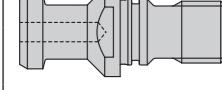

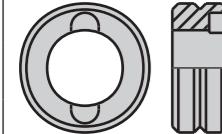

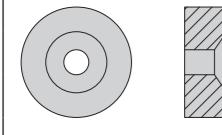

Pokolm is using quality screws, screwdrivers and other accessories made by leading manufacturers. It is always optimally coordinated with the high-performance capabilities of our own products.

ASSEMBLING INSTRUCTIONS

for Coolant supply tubes for HSK Form A

When using HSK-A arbors with internal coolant supply, it is necessary to assemble these arbors with a coolant supply tube. To assemble, please follow the instructions below. The required accessories are mentioned for every arbor size.

**Step 1**

Usually, the seal ring (2) is already assembled in the coolant supply tube (3). If it has come loose, please put it back to the sealing groove (3a) of the supply tube (3).

Step 2

Insert the narrow end of the tube (3) into the spanner (4).

Step 3

Screw the tube (3) into the arbor (1) from the bottom up and make sure that the seal ring (2) is not off-centre or squeezed. Otherwise it loses its sealing function.

OUR POKOLM BAG OF TRICKS

Shell-type Extensions

Reduction adapters - shell type to thread connections

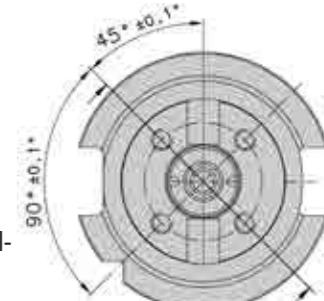

You have to machine an extensive deep component? The requested arbor-extension is not available as a standard item? The production of customized arbors is too expensive? There is no time left for any special action?

SPECIAL SITUATIONS REQUIRE SPECIAL SOLUTIONS.

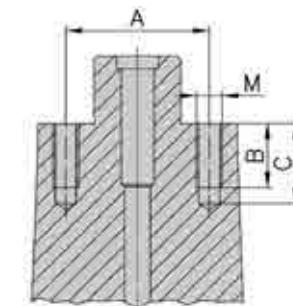

Our latest shell-type extensions and the thread-connections/shell-type combi adapters allow to achieve a possibility of assembling tool beyond our standard range.

1. an existing standard arbor has to be equipped with supplement bore holes according to our adjoining sketch.
2. screw on your selected adapter.
3. start your job.

THIS RESULTS IN EXTENSIONS BETWEEN 50 AND 100 MM

*for fixing an adapter, you need 4 screws each, included in extent of supply.

ASSEMBLING INSTRUCTIONS

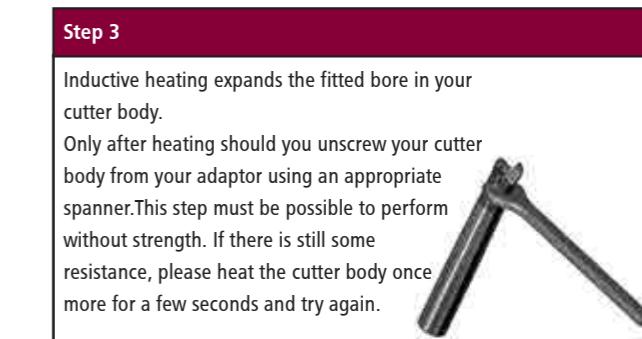

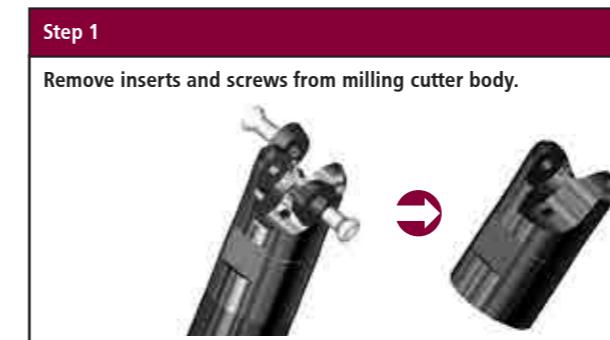

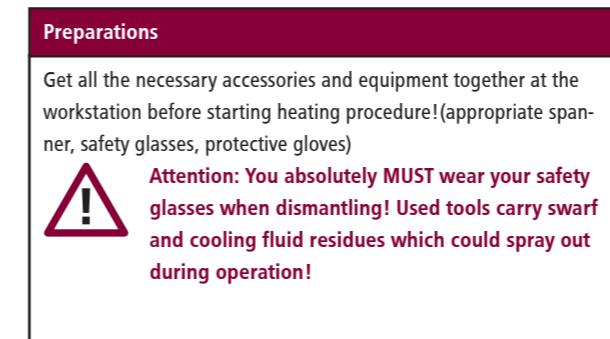

DuoPlug®

To guarantee optimum results and safe operation of our DuoPlug® system, please follow the instructions below carefully.

Assembling:

Dismantling:

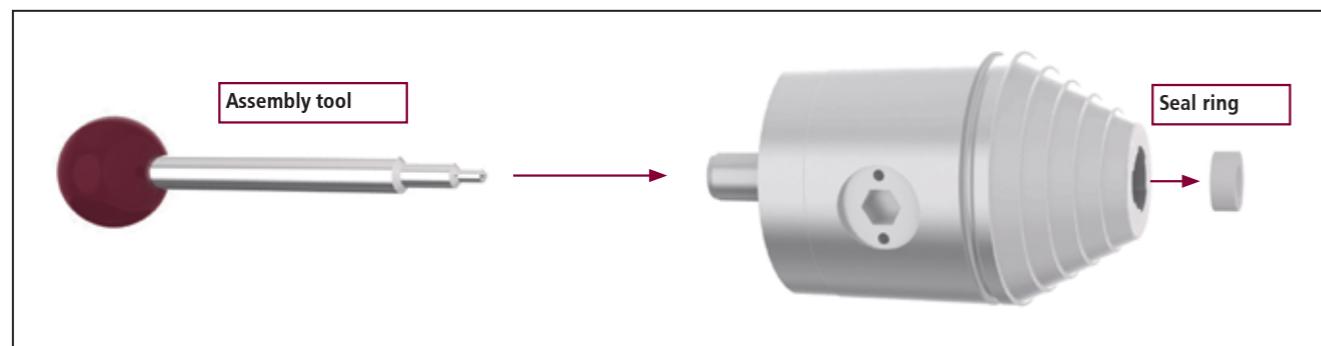

For further inquiries concerning the DuoPlug® system, please do not hesitate to contact us.

ASSEMBLING INSTRUCTIONS

Seal ring for CNC precision drill chuck

Two seal rings for different drill diameters are generally included in the scope of delivery of all Pokolm CNC precision drill chucks. Please observe the instructions when exchanging the seal rings or replacing them with a corresponding spare part.

Disassembly:

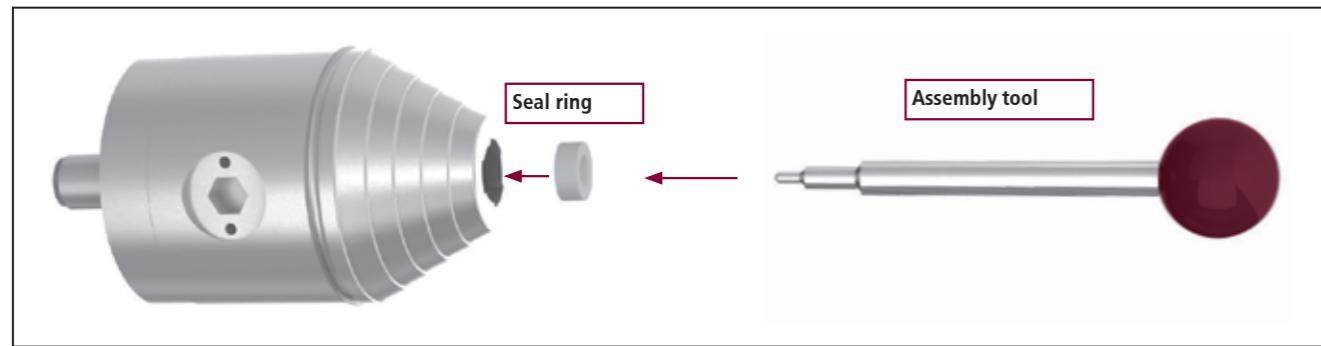

Step 1

Open the clamping jaws of the drill chuck with an Allen key. Dismantle the drill chuck on the machine side until the spindle can be freely accessed.

Step 2

Insert the assembly tool in the middle of the drill chuck on the side of the spindle until it meets resistance from the seal ring. By applying light pressure the seal ring can now be removed by pushing it forward and out through the clamping jaws.

Assembly:

Step 1

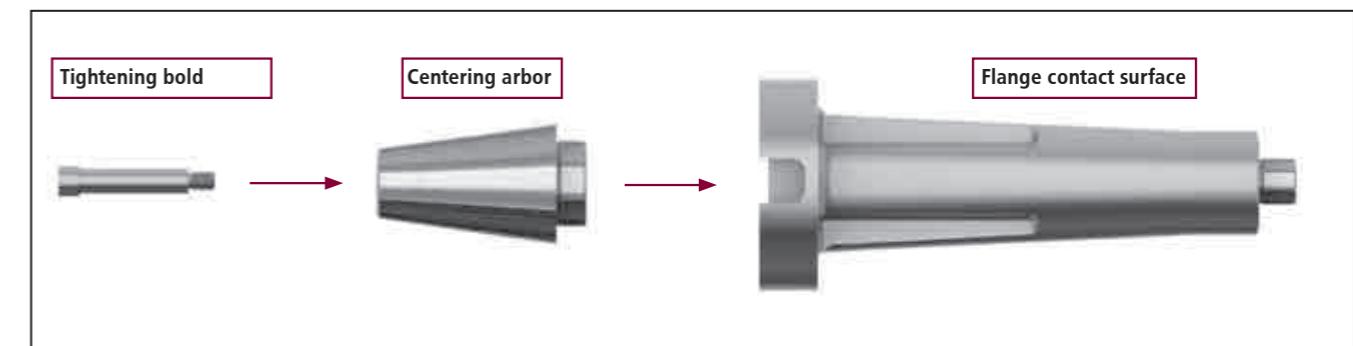

Place the new seal ring with the hollow side facing the tool onto the assembly tool and insert from the front through the clamping jaw up to the seat of the seal ring. The seal ring is held in place with an O-ring.

ASSEMBLING INSTRUCTIONS

Centering arbor and flange contact surface

In order to ensure a trouble-free insertion into the machine during centering and screwing-on the flange contact surface make sure that the centering arbor and the flange contact surface are not screwed together tightly. The fastening screw that is provided is constructed in such a way that it prevents the centering arbor and the flange contact surface from becoming tightly screwed together. Please observe the following instructions:

Assembly of the centering arbor:

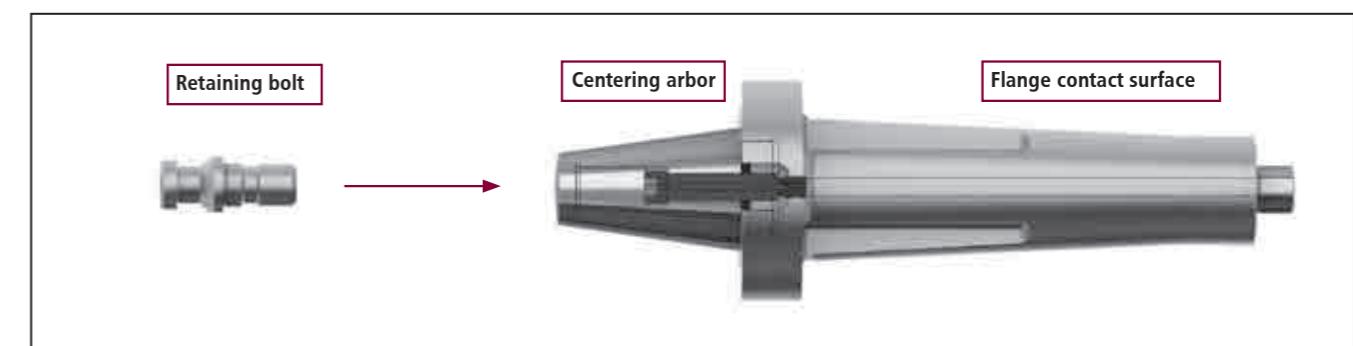

Step 1

Insert the centering arbor into the corresponding fitting of the flange contact surface.

Step 2

Insert the tightening bolt that is provided into the centering arbor and screw into the threading of the flange contact surface with an Allen key (10 mm) and then tighten by hand. Now the centering arbor and the flange contact surface are connected to each other.

Assembly of the retaining bolt:

Step 1

Screw the retaining bolt into the inside thread of the centering arbor and tighten by hand. The flange contact surface can now be inserted and screwed to the machine.

QUICKFINDER

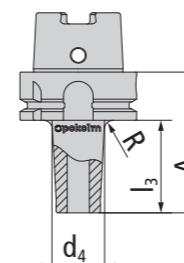

Fit zone diam. of threaded shank end mill bodies:

Thread size	M 5	M 8	M 10	M 12	M 16
Length fit zone in mm	5,5	8,5	10,5	12,5	17,0
Starting torque in Nm	7	15	30	50	100

Thread sizes for Shell-type arbors:

Pilot diameter in mm	16	22	27	32	40
Fixing screw	M 8	M 10	M 12	M 16	M 20

Theoretical d4 and l3:

The arbor dimensions d4 and l3 (see illustration at left) are calculated up to the theoretical point of intersection between arbor taper and collar.

Please take the radius R (5-8 mm depending on arbor type) into account for practical use.

Theoretical usable end mill length of Solid carbide end mills in mm*:

	diam. of shank (DIN 6535) d2 h6	2 - 5	6 + 8	10	12 + 14	16 + 18
	length of shank (DIN 6535) l2 $^{+2}_{-0}$	28	36	40	45	48
	diam. of shank (DIN 6535) d2 h6	20	25	32 + 36		
	length of shank (DIN 6535) l2 $^{+2}_{-0}$	50	56	60		

*this usable length appears through deduction of the DIN-shank-length (l2 according to DIN 6535) from the overall length l1 of the end mill or of the solid carbide adapters. See table above.

Features:

	toric tool		incorporated insert		arbors with zero reach
	7° positive axial rake angle		clamping flat		DuoPlug®
	12° positive axial rake angle		concave moulding		shim
	17° positive axial rake angle		working depth		internal coolant supply
	Solid Carbide		suitable for high-speed machining		especially suitable f. non-ferr. materials
	chamfer		wet machining possible		on request
	2-point contact milling		dry machining possible		stock item, subject to confirmation
	wet machining required		for direct spindle mounting		available as long as stock lasts
	dry machining required		long series		stainless-acid-and heat resistant
	balance grade		dense antivibration material
